

Living better

PassivEnergy™ is a new smart home system designed to help you use only the energy you need.

And with 29% of carbon emissions coming from our homes, there's ample room for improvement. If you are wasting energy today, it could save you up to 18%¹ on your annual energy bill and reduce your home's carbon footprint. We like to think of it as living better.

At the heart of PassivEnergy™ is the PassivHub. This small white box talks wirelessly to sensors and controls installed around your home, and via the internet to our secure online service. Your window on the system is the PassivController – a touchscreen that asks the right questions to work out what you need and what your home should do to support you.

1. In 2008 The Energy Saving Trust estimated that 80% of homes didn't have basic heating controls. BEAMA estimates that installing best practice heating controls could save 18% on energy bills in homes like these. PassivEnergy has Advanced Heating Controls built in, as well as other clever stuff to reduce energy waste even further.

The PassivController

Benefits at a glance

Cost

If you're wasting energy, you're paying for something you don't need. PassivEnergy™ could save you money. And as a home improvement, PassivEnergy™ is quite possibly the best investment you'll ever make.

Convenience

Rather than worry about the temperature on your thermostats or the energy wasted by having your TV on standby, let PassivEnergy™ take care of everything for you. Set the rules you want once and you're done.

Comfort

PassivEnergy™ keeps you comfortable by heating your home without sudden changes in temperature. It warms your home more efficiently in the morning before you get up and when you go on holiday, it ensures you have heat and hot water on your return.

Control

PassivEnergy™ is built around you and your family. Tell it how you live your life, and it'll manage when you need to use energy, and when you can save it.

Carbon

PassivEnergy™ reduces wasted energy by carefully managing your heating and hot water, and by controlling your electrical appliances. Reduce wasted energy and you reduce your carbon footprint. It's as simple as that.

I want one now

PassivEnergy™ will cut out energy waste in your home. Less energy used means saving money year on year and a reduced carbon footprint.

Simple and smart

We've been living with complicated, unhelpful systems in the home for so long that most of us don't even question the way that they run.

For example, it is estimated that the UK wastes a staggering £8.5 billion of energy in the UK every year. Fortunately, PassivEnergy™ works with you to understand and optimise your energy consumption. Here's what you can expect:

Introducing The Occupancy Button

Instead of switching everything off at the socket every time you leave the house or go to bed, PassivEnergy™ lets you power down the house at the flick of a switch. And with up to 8%¹ of the energy we use from products on standby, that could add up to quite a saving.

Introducing Weather compensation

Weather can be unpredictable, to say the least – and how often do you adjust your energy settings based on the conditions outside? Our system takes weather feeds and manages your energy needs in line with the world outside the window. So you don't have to.

Remote control

Soon PassivEnergy™ will be accessible via our iPhone app, giving you greater flexibility and control when on the move. And later in the year you will be able to get PassivEnergy™ on any smart phone or web enabled device you want to use.

About us

At PassivSystems™, we focus on making homes work harder for the people who live in them. From energy management, to smart security, to assisted living, our goal is to create simple, human-centred products that help people live better and look after each other.

All of our systems require professional installation, and we couldn't do it without the most qualified installers. We select each one for their professionalism and customer service. We think they are the best you will find in the UK.

Save up to 18% on your energy bills while you sleep
